markets this book is a collection of papers presented in the conference held at the federal reserve bank of Chicago in September 2010 that examines the role of macroprudential regulation in the financial industry shocked by the experience of the last few years many argue that the more traditional microprudential regulatory tools are inadequate to create a safe and stable financial system the microprudential paradigm relies on the presumption that the financial system as a whole can be made safe by ensuring individual financial institutions are made safe this ignores interconnections and externalities whereby the actions of one financial institution or events in financial markets can lead to spillover effects that adversely affect general market conditions other financial institutions and ultimately the economy as a whole instead it is argued there is a need for both microprudential approaches to regulate individual institutions and macroprudential approaches to manage the overall financial system risks conference participants discussed macroprudential regulation and related issues including what are the theoretical motivations for macroprudential regulation how would it interact with other regulatory and macroeconomic policies especially monetary policy what would be the specific macroprudential tools who should have control over the macroprudential tools how should a macroprudential regulator be structured where should it be housed how can macroprudential policies be structured across national borders what role if any can market discipline play in supporting macroprudential objectives concentrating on public policy issues the conference featured keynote addresses by influential past and present public policy figures including Paul Volcker chairman of the US President's Economic Recovery Advisory Board and former chairman of the Federal Reserve System Tommaso Padoa-Schioppa chairman of the Promontory Financial Group Europe and former chairman of the Basel Committee on Banking Supervision Jaime Caruana general manager of the Bank for International Settlements and former chairman of the Basel Committee on Banking Supervision and Charles Taylor director of the Pew Charitable Trust financial reform project and former executive director of the Group of Thirty contents special addresses protecting the stability of global financial markets Paul A. substantiate their theory with reference to the industry s evolution during the last three centuries they show how investment banking networks were formed and identify the informal contracts that they supported this historical development points to tensions between the relational contracting of investment banks and the regulatory impulses of the state thus providing some explanation for the periodic large scale state intervention in the operation of capital markets their theory also provides a technological explanation for the massive restructuring of the capital markets in recent decades which the authors argue can be used to think about the likely future direction of the investment banking industry essays from the 2010 centenary conference of the 1910 jekyll island meeting of american financiers and the us treasury hawkland s casebook provides detailed information on commercial and banking the casebook provides the tools for fast easy on point research part of the university casebook series it includes selected cases designed to illustrate the development of a body of law on a particular subject text and explanatory materials designed for law study accompany the cases this workbook is designed for use both as a companion to our book investment banking valuation lbo m a and ipos third edition as well as on a standalone basis investment banking focuses on the primary valuation methodologies currently used on wall street namely comparable companies analysis precedent transactions analysis discounted cash flow dcf analysis leveraged buyout lbo analysis mergers acquisitions m a analysis and initial public offering ipo valuation from both a sell side and buy side perspective our workbook seeks to help solidify knowledge of these core financial topics as true mastery must be tested honed and retested over time we envision the workbook being used as a self help tool for students job seekers and existing finance professionals as well as in formal classroom and training settings financial crises have been pervasive for many years their frequency in recent decades has been double that of the bretton woods period 1945 1971 and the gold standard era 1880 1993 comparable only to the period during the great depression nevertheless the financial crisis that started in the summer of 2007 came as a great surprise to most people what initially was seen as difficulties in the u s subprime mortgage market rapidly escalated and spilled over first to financial markets and then to the real economy the crisis changed the financial landscape worldwide and its full costs are yet to be evaluated one important reason for the global impact of the 2007 2009 financial crisis was massive illiquidity in combination with an extreme exposure of many financial institutions to liquidity needs and market conditions as a consequence many financial instruments could not be traded anymore investors ran on a variety of financial institutions particularly in wholesale markets financial institutions and industrial firms started to sell assets at fire sale prices to raise cash and central banks all over the world injected huge amounts of liquidity into financial systems but what is liquidity and why is it so important for firms and financial institutions to command enough liquidity this book brings together classic articles and recent contributions to this important field of research

it provides comprehensive coverage of the role of liquidity in financial crises and is divided into five parts i liquidity and interbank markets ii the public provision of liquidity and regulation iii money liquidity and asset prices iv contagion effects v financial crises and currency crises
